11TH SALZBURG VOICE SYMPOSIUM | SECOND ANNOUNCEMENT PRESYMPOSIUM WORKSHOP

HOLISTIC APPROACH IN SILENT REFLUX AND VOICE

Friday, 22 August 2014, 9 a.m. - 7 p.m.

Pre-Symposium / Hands on Workshops / In Office Procedures

Topics and Courses:

- » Transnasal Esophagoskopie (TNE)
- » PH-Testing for Silent Reflux (Restech-System)
- » Dealing with Silent Reflux;
Diagnostic-Therapy-Dietary Regime

Update Courses:

- » Indirect Phonosurgery and Interventional Laryngology, In Office Procedures in LA
- » Laser Treatment Under Laryngeal
Fiberoendoscopy, In Office Procedures in LA
- » Skills and Trick in Voice Therapy

With: Craig Zalvan (USA), Markus Hess (DE), Rehab Awad (UK), Eugenia Chavez (MX), Ilter Denizoglu (TU), Jürgen Wendler (DE), Jitka Vydrová (CZ), James P. Thomas (US), Michael Baschata (AT), Flavio Pieri (IT), Josef Schlömmicher-Thier (AT)

The congress language is english.

In COOPERATION with the DEPARTEMENT OF SURGERY at the UNIVERSITY HOSPITAL of the PARACELUSUS MEDICAL UNIVERSITY SALZBURG, HEAD Prof. Dr. DIETMAR ÖFNER

TNE:

The evolution of digital technology has allowed for more office based diagnostics and intervention. Transnasal Esophagoscopy, TNE, is a powerful tool in the evaluation of a patient with dysphagia. Topical anesthesia avoids the need for sedation and affords a complete look at the oropharyngeal and esophageal phase of swallowing. Mucosal lesions, extrinsic lesions, motility disorders, and esophagitis are all easily diagnosed in the office setting. Unique to TNE is the ability to feed an awake patient, at times allowing the exact location and cause of the dysphagia to be ascertained.

Location:

Konferenzzentrum Heffterhof Salzburg,
Maria-Cebotari-Straße 1-7, 5020 Salzburg, Austria

PH-Testing:

Silent reflux, extraesophageal reflux, and laryngopharyngeal reflux (LPR) all refer to the changes in the laryngopharynx due to reflux of acidic stomach contents and the digestive enzyme pepsin. Oropharyngeal pH testing plays an important role in diagnosing patients refractory to prior treatments, with an unknown diagnosis, and to determine the absence of LPR in certain circumstances.
